

Science Matters

Science World is more than just a fun way to spend the day - it's an incubator for inspiring young minds to become tomorrow's science and technology leaders.

We offer engaging exposure to science through:

- hands-on exhibits in our galleries
- community outreach programs across the province
- immersive giant films in the OMNIMAX® Theatre
- zany demonstrations on the Peter Brown Family Centre Stage

Fun? Definitely. But Science World's mission goes beyond

creating an entertaining experience. We aim to ignite the curiosities of today's youth so that they can become tomorrow's innovators - curing diseases, protecting the environment, and shaping our economy.

The need to inspire youth with science is critical. While there are more science and technology jobs that need to be filled, fewer students are pursuing careers in these areas. The result? An ever-growing science gap between the demand and supply of workers in science-related fields such as mining, healthcare and forestry.

If the gap continues to widen, who will build our cities, heal our sick and discover new technologies? It's up to us to ensure there is a supply of youth eager to fill those roles.

Our future matters. Science matters. With your help, Science World is closing the gap.
